Applicant's election with traverse of Group II and siderite in the reply filed on 1/9/07 is acknowledged. The traversal is on the ground(s) that a water soluble product is required, the examiner hasn't shown that water-soluble metal salts would lead to a materially different product, the declaration is persuasive, In re Ochiai, any of the macro/micronutrients may be reacted, and that the search appears to concern sulfamates rather than any particular metal salt. This is not found persuasive because the claimed process of correcting macro/microdeficiencies can be accomplished with insoluble salts in an acidified soil, a materially different product is not the test (but rather an identical product with a materially different process), the declaration is persuasive only for the Woodhouse reference, prosecution is not yet ripe for the application of In re Ochiai, it is unclear as to whether applicants are stipulating on the record that all macro/micronutrients are equivalent, the suggested nature of a search is mere speculation.

The requirement is still deemed proper and is therefore made FINAL.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 51-55, 62, 74, 78-79 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kirk-Othmer, Encyclopedia of Chemical Technology, 4<sup>th</sup> ed., vol. 23. "Sulfamic acid and sulfamates", p. 120-133, 1997.

Krk-Othmer teach that inorganic sulfamates are quite water soluble (p. 125 under "Sulfamates". Iron sulfamate is specified (Table 5 page 126).

The examiner takes notice under MPEP 2144.03 that standard solutions are well-known in the analytical chemistry arts.

It would have been obvious to one of ordinary skill to make up a standard solution of iron sulfamate for purposes of determine the amount of iron in an aqueous sample. As to the claimed amount of iron and hexavalent sulfur, such must fall within the range of solutions made for such purposes. As for the claimed use for promoting plant growth and the method of making, intended uses and methods of making are not given weight when determining the patentability of composition claims during prosecution before the USPTO.

No claims allowed.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
